GLOBAL
EDITION

Textbook

- Computer Networking: A Top-Down Approach
- Global Edition, 7
- Authors: Kurose and Ross
- Publisher: Pearson
- ISBN: 9780136079675

Computer Networking

A Top-Down Approach

SEVENTH EDITION

HIGHLY RECOMMENDED

Kurose • Ross

Hours/Week

Lectures

Here!

No lecture in week 8

Tutorials

Start from week 3

No tutorial in week 9

Assessment

Midterm Test

Week 8 Lecture Slot

8 Oct 2018, 2:15 – 3:15 pm

Final Exam

Semi-Open Book

(one double-sided A4 cheat sheet allowed)

Mon 26 Nov

Four Individual Programming Assignments

No mercy against

- plagiarism
- violation of naming conventions

Slides posted before
the lecture might **not**
be **finalized**

Slides might not cover
all the materials

What
to expect?

What you will **NOT** learn in CS2105

- How to configure hardware
 - Covered in [CS3103 Computer Networks Practice](#). Hands on experiments in subnetting, DHCP, DNS, RIP, OSPF, TCP handshake and congestion mechanism
- Mobile and wireless networks
 - Covered in [CS4222 Wireless Networking](#)

What you **WILL** learn in CS2105

- Principles and Concepts of Computer Networking
- Introduction to Network Application Programming

CS2105 can be EASY

- You are familiar with the system (Internet)
- Very little math
- Concepts are intuitive and based on practical design considerations

CS2105 can be HARD

- Many concepts are covered
- Socket Programming!

Assignment 0

Due on Fri, 31 Aug, 23:59

Test on sunfire
